Buatlah suatu database *library* yang terdiri dari tiga tabel yaitu *book*, *user*, dan *flow* dengan kolom sebagai berikut:

- Books: **bookID**, bookTitle, authorName, borrowedStatus
- Flow: **flowID**, userIDBorrowing, bookIDBorrowed, borrowDate, returnDate
- User: **userID**, userName, numberOfBorrowing, numberOfReturning

Gunakan klausa *JOIN* untuk

- Menampilkan semua judul buku yang memiliki status dipinjam dan tanggal peminjamannya kemarin
- Menampilkan semua judul buku, termasuk buku yang tidak dipinjam dan userID peminjam yang meminjam buku tersebut
- Menampilkan semua buku yang dipinjam dan semua userID, baik dia meminjam atau tidak
- Menggunakan satu *query*, buatlah daftar semua judul buku dan nama *user* yang meminjam buku tersebut dan *user* tersebut telah meminjam lebih dari 3 buku.

1.

a. Membuat data base :

```
CREATE DATABASE IF NOT EXISTS library
```

b. Membuat table:

1. Tabel book :

```
CREATE TABLE IF NOT EXISTS Books(  
    bookID INT(13) NOT NULL AUTO_INCREMENT,  
    bookTitle VARCHAR(255) NOT NULL,  
    authorName VARCHAR(255) NOT NULL,  
    borrowedStatus ENUM('Dipinjam','Dikembalikan'),  
    PRIMARY KEY (bookID)  
)
```

2. Tabel user:

```
CREATE TABLE IF NOT EXISTS `user`(  
    userID INT(10) NOT NULL AUTO_INCREMENT,  
    userName VARCHAR(255) NOT NULL,
```

```

        numberOfBorrowing INT(2) NOT NULL,
        numberOfReturning INT(2) NOT NULL,
        PRIMARY KEY (userID)
    )

```

3. Table flow:

```

        CREATE TABLE IF NOT EXISTS flow(
        flowID INT(10) NOT NULL AUTO_INCREMENT,
        userIDBorrowing INT(10) NOT NULL,
        bookIDBorrowed INT(13) NOT NULL,
        borrowDate DATE,
        returnDate DATE,
        PRIMARY KEY (flowID),
        FOREIGN KEY (userIDBorrowing) REFERENCES `user`(userID),
        FOREIGN KEY (bookIDBorrowed) REFERENCES books(bookID)
    )

```

c. Mengisi tabel.

1. Tabel book:

```

        INSERT INTO books(bookID,bookTitle,authorName,borrowedStatus)
VALUES
        (1,'Data Structure','Lipschute','Dipinjam'),

```
INSERT INTO flow
```

```
(flowID, userIDBorrowing, bookIDBorrowed, borrowDate, returnDate)
